

# EQUINE BLUELITE®

by TechMix

Unique electrolytes to maximize hydration when your horse needs it most.

Proper hydration is required for a horse to maintain normal fluid-electrolyte balance essential for health and performance. Unlike traditional, salt- or sugar-based hydration products where the goal is to increase water intake, Equine BlueLite contains a combination of electrolytes with sodium chloride needed for electrolyte balance, prebiotics to support beneficial gut health, energy metabolites for energy uptake, and other vitamins and minerals to help achieve balanced health. Equine BlueLite is available in a powder, pellet, or jel, allowing horse owners flexibility for easy use. Use Equine BlueLite to ensure that the horse maintains electrolyte balance, encourages water and feed intake, and receives the hydration needed to stay healthy during times of extreme exercise, stress or heat.

**KEY FUNCTIONAL COMPONENTS:** Calcium, Potassium, Magnesium, Probiotics, Vitamins, Energy Metabolites, Sodium Chloride

## FEATURES & BENEFITS

- Instant results when your horse needs it most
- Provides the essential nutrients lost during heavy workout
- Balanced electrolyte formula with probiotics
- Easily digestible, non-abrasive
- Contains essential amino acids, vitamins and minerals
- Helps establish and maintain optimum digestive pH for quick energy, electrolyte, and vitamin utilization
- Supports muscle recovery

## WHEN TO USE

- Whenever horses need additional performance or energy
- When settling into a new farm or boarding facility
- Transitioning from grass to dry forage
- During weather changes or extreme weather conditions
- During shows and events, or when transporting
- When training or on trail rides
- For horses stressed from parasites or marginal nutrition

## DIRECTIONS FOR USE

### POWDER:

Feed Use: Top dress on daily ration.  
Water Use: Mix Equine BlueLite Powder into a minimum of 1 gallon drinking water.  
Provide 1-4 ounces dependent on exercise intensity.

### PELLETS:

Top dress or mix into the daily ration at 4-8 ounces per horse per day based on the level of stress or activity of the horse. When transporting, it is recommended to use 4-8 ounces per horse per day for 1 week prior to transport and 2 days after returning.

### JEL:

Give entire tube (60 g) directly on the back of the horse's tongue. Us as needed during times of dehydration.

\*Suggested usage rates are based on a 1000 lb horse, adjust product usage according to body weight of horse.

## AVAILABLE PACKAGE SIZES - CONTROL NUMBER

### POWDER:

6 lb. pail 60048-187

### PELLETS:

5 lb. pail 64517-985

15 lb. pail 64517-987

### JEL:

60 g tube 65455-785
