TechMix Equine

Hydration for Equine Athletes.

As a competitive barrel racer, Cheryl Murray travels frequently with her horses and knows the importance of keeping her horses well hydrated when on the road. "My horses become easily dehydrated due to long hauls to competitions for barrel racing. Equine BlueLite Pellets and BlueLite Powder have improved hydration dramatically since I started feeding them to my horses."

Murray developed a plan that includes using TechMix Equine products at home and when on the road. "I feed the pellets as daily maintenance. I add BlueLite Powder to the water at home and at the barrel competitions. Because they get used to the blue color and the palatable taste of the water with BlueLite added at home, they don't hesitate to drink the BlueLite water at shows. That is a huge advantage as horses usually won't drink unfamiliar water at shows."

Using TechMix Equine hydration products, Murray has found the perfect combination to help her horses to stay hydrated and healthy. "I feel that my horses perform at a top level and have less body soreness because their hydration levels are optimal. Since switching to BlueLite Pellets and BlueLite Powder, my horses are able to maintain hydration. This is because TechMix products do not use high amounts of salt derivatives in the electrolyte."

"I am very happy with TechMix BlueLite Pellets and BlueLite Powder," Murray says. "My horses stay hydrated and are overall healthier."
